Evan:

I wanted to touch base with you about our waste hauling contractor, Capstone Logistics. This is a small business and it is my understanding that they may be having difficulty making payroll with a net 60 pay and be able to provide us the trucks that we need to complete the project efficiently. It is my understanding that they are having to put their trucks on jobs that pay more quickly to meet payroll and therefore are unable to provide us the trucks we need. You guys would have to confirm this with them and come up with whatever agreement is appropriate. I know that based upon the shutdown that it is difficult for everyone. How much influence do you have in possibly doing net 14 pay (2-weeks) if they provide us the trucks we need to efficiently complete the excavation/disposal? Let me know if this is even a possibility.

Thanks
